

Qadri AI

The Ultimate Intelligent Assistant

Comprehensive Guide Book & Feature Reference
Version 1.0.38

Developed by: Qadri AI Team

Head / CEO / Founder: Muzamil

Welcome to Qadri AI

Welcome to the future of desktop intelligence. Qadri AI is an advanced, privacy-focused, multimodal AI assistant designed by the Qadri AI Team to streamline your workflow, automate your tasks, and act as your ultimate digital companion.

Core Features & Capabilities

1. Natural Real-time Voice Chat (Jarvis Mode)

Experience seamless, low-latency voice conversations. Qadri AI features a female persona voice (now enhanced with the premium Kore model) that listens continuously and responds with natural human-like emotion.

2. Advanced Desktop Automation

Qadri AI has deep integration with your operating system. It can open applications, close processes, manage files, and automate keyboard/mouse inputs directly on your machine.

- **WhatsApp Smart Send:** Tell Qadri AI to message someone, and it will automatically open WhatsApp, search for the contact, type your message, and send it.
- **Movie Player:** Ask Qadri AI to play a movie, and it will fetch the stream and launch a custom, transparent, ad-free video player overlay right on your screen.
- **System Monitoring:** Check your CPU, RAM, battery, and network status instantly.

3. Contextual Screen Telepathy

Qadri AI sees what you see. Using local screen capture, the AI can analyze your current window, read error logs, explain code, or summarize whatever is visible on your screen.

4. Persistent "Digital Memory" (Vault)

Qadri AI remembers you. Everything important you discuss is saved locally in the **Qadri Data** folder in your Documents. It remembers your preferences, project details, and past conversations seamlessly across sessions.

5. Floating Hologram Overlay

Press **Ctrl+Shift+J** to summon the Jarvis Overlay anytime, over any full-screen game or application.

How to Use

Once installed, you can access Qadri AI from the system tray or desktop shortcut.

- **Wake Word:** Just say the wake word to start speaking.
- **Text Chat:** Use the modern UI to type queries, attach files, or drag-and-drop documents.
- **Settings:** Click the gear icon to configure API keys, update settings, or customize your persona.
